Lesli Anderson
Node.js Experience
MART 441

I feel like node.js aligns with what we have been covering this semester. The Server-side is the backbone of what we have been doing all semester if I think about it. Having a functioning understanding of how the Server-side functions seem like a quality skill set for any programmer to know.

Node.js provides us with the understanding of a lightweight real-time application that is efficient. I can see how this would be good for data-intensive real-time applications. This is how most of our video streaming apps work.

This topic for me was very challenging. In fact, I feel like the whole semester was challenging for me. I do not have an issue with things being challenging it helps us grow. I have gained an incredible amount of knowledge this semester. Each week this semester definitely built upon the next and had me pushing myself.
